Reviews are purchase d in large private groups on Facebook and other sites. We hand-collect data on t hese markets and then collect a panel of data on these products' ratings and reviews on Amazon, as well as their sales rank, advertising, and pricing polici es. We find that a wide array of products purchase fake reviews, including produ cts with many reviews and high average ratings. Buying fake reviews on Facebook is associated with a significant but short-term increase in average rating and n umber of reviews. We exploit a sharp but temporary policy shift by Amazon to sho w that rating manipulation has a large causal effect on sales. Finally, we exami ne whether rating manipulation harms consumers or whether it is mainly used by h igh-quality products in a manner like advertising or by new products trying to s olve the cold-start problem. We find that after firms stop buying fake reviews, their average ratings fall and the share of one-star reviews increases significa ntly, particularly for young products, indicating rating manipulation is mostly used by low-quality products.
